Scanned page 1

so a viewer can search it. The merged file keeps that text layer, the bookmarks of every part, and the links on the pages. A scanned book is the other common case: each page is one big image. Re-encoding those images is what makes the file smaller, while the hidden text layer and the bookmarks stay where they are. The numbers in the headings are there so the order of the merged pages can be checked at a glance. PDF files pile up: a contract scanned in three parts, a report whose chapters came as separate downloads, slides exported one section at a time. Joining them should not mean uploading them anywhere. This sample is text, so a viewer can search it. The merged file keeps that text layer, the bookmarks of every part, and the links on the pages.
